

BIG DATA IN THE WASTE INDUSTRY

A photograph showing four individuals standing in front of a massive pile of waste, likely at a recycling or waste management facility. The waste consists of various plastic bottles, containers, and other debris. The individuals are wearing high-visibility yellow safety vests. The background shows industrial structures and a large pile of waste extending into the distance.

CHARACTERISTICS OF BIG DATA

BIG DATA HAS BEEN USEFUL IN OTHER INDUSTRIES

The logo for Predix, featuring the word "PREDIX" in a bold, blue, sans-serif font.

**Saved \$7 Million on
jet fuel by analyzing
jet engine data**

The logo for Tesco, featuring the word "TESCO" in a bold, red, sans-serif font with blue horizontal lines underneath.

**Saved \$78 million in
warehouse stocking
costs through regional
shopping habits**

The logo for Aarhus University, featuring a stylized blue graphic of a mountain and a semi-circle, followed by the text "AARHUS UNIVERSITY" in a blue, sans-serif font.

**Reduced energy
consumption by 8.1%
through feedback to
citizens**

DATA MANAGEMENT IS COMPLICATED

- Poor management leads to unusable data
- Re-organizing data to a usable state can take 1-2 years

BENEFICIAL USES OF DATA ON WASTE

BENEFICIAL USES OF DATA ON WASTE

● Performance Analysis

● Predictive Analytics

● Route Optimization

● Feedback to Citizens

Recycling Percentage By Type Per Municipality

- Assess organizations' performance
- Identify weaknesses, measure success
- Comparisons between municipalities

BENEFICIAL USES OF DATA ON WASTE

● Performance Analysis

● Predictive Analytics

● Route Optimization

● Feedback to Citizens

- Use data to predict future events
- Detects trends in waste production
- Predict yearly costs, future supply and demand

BENEFICIAL USES OF DATA ON WASTE

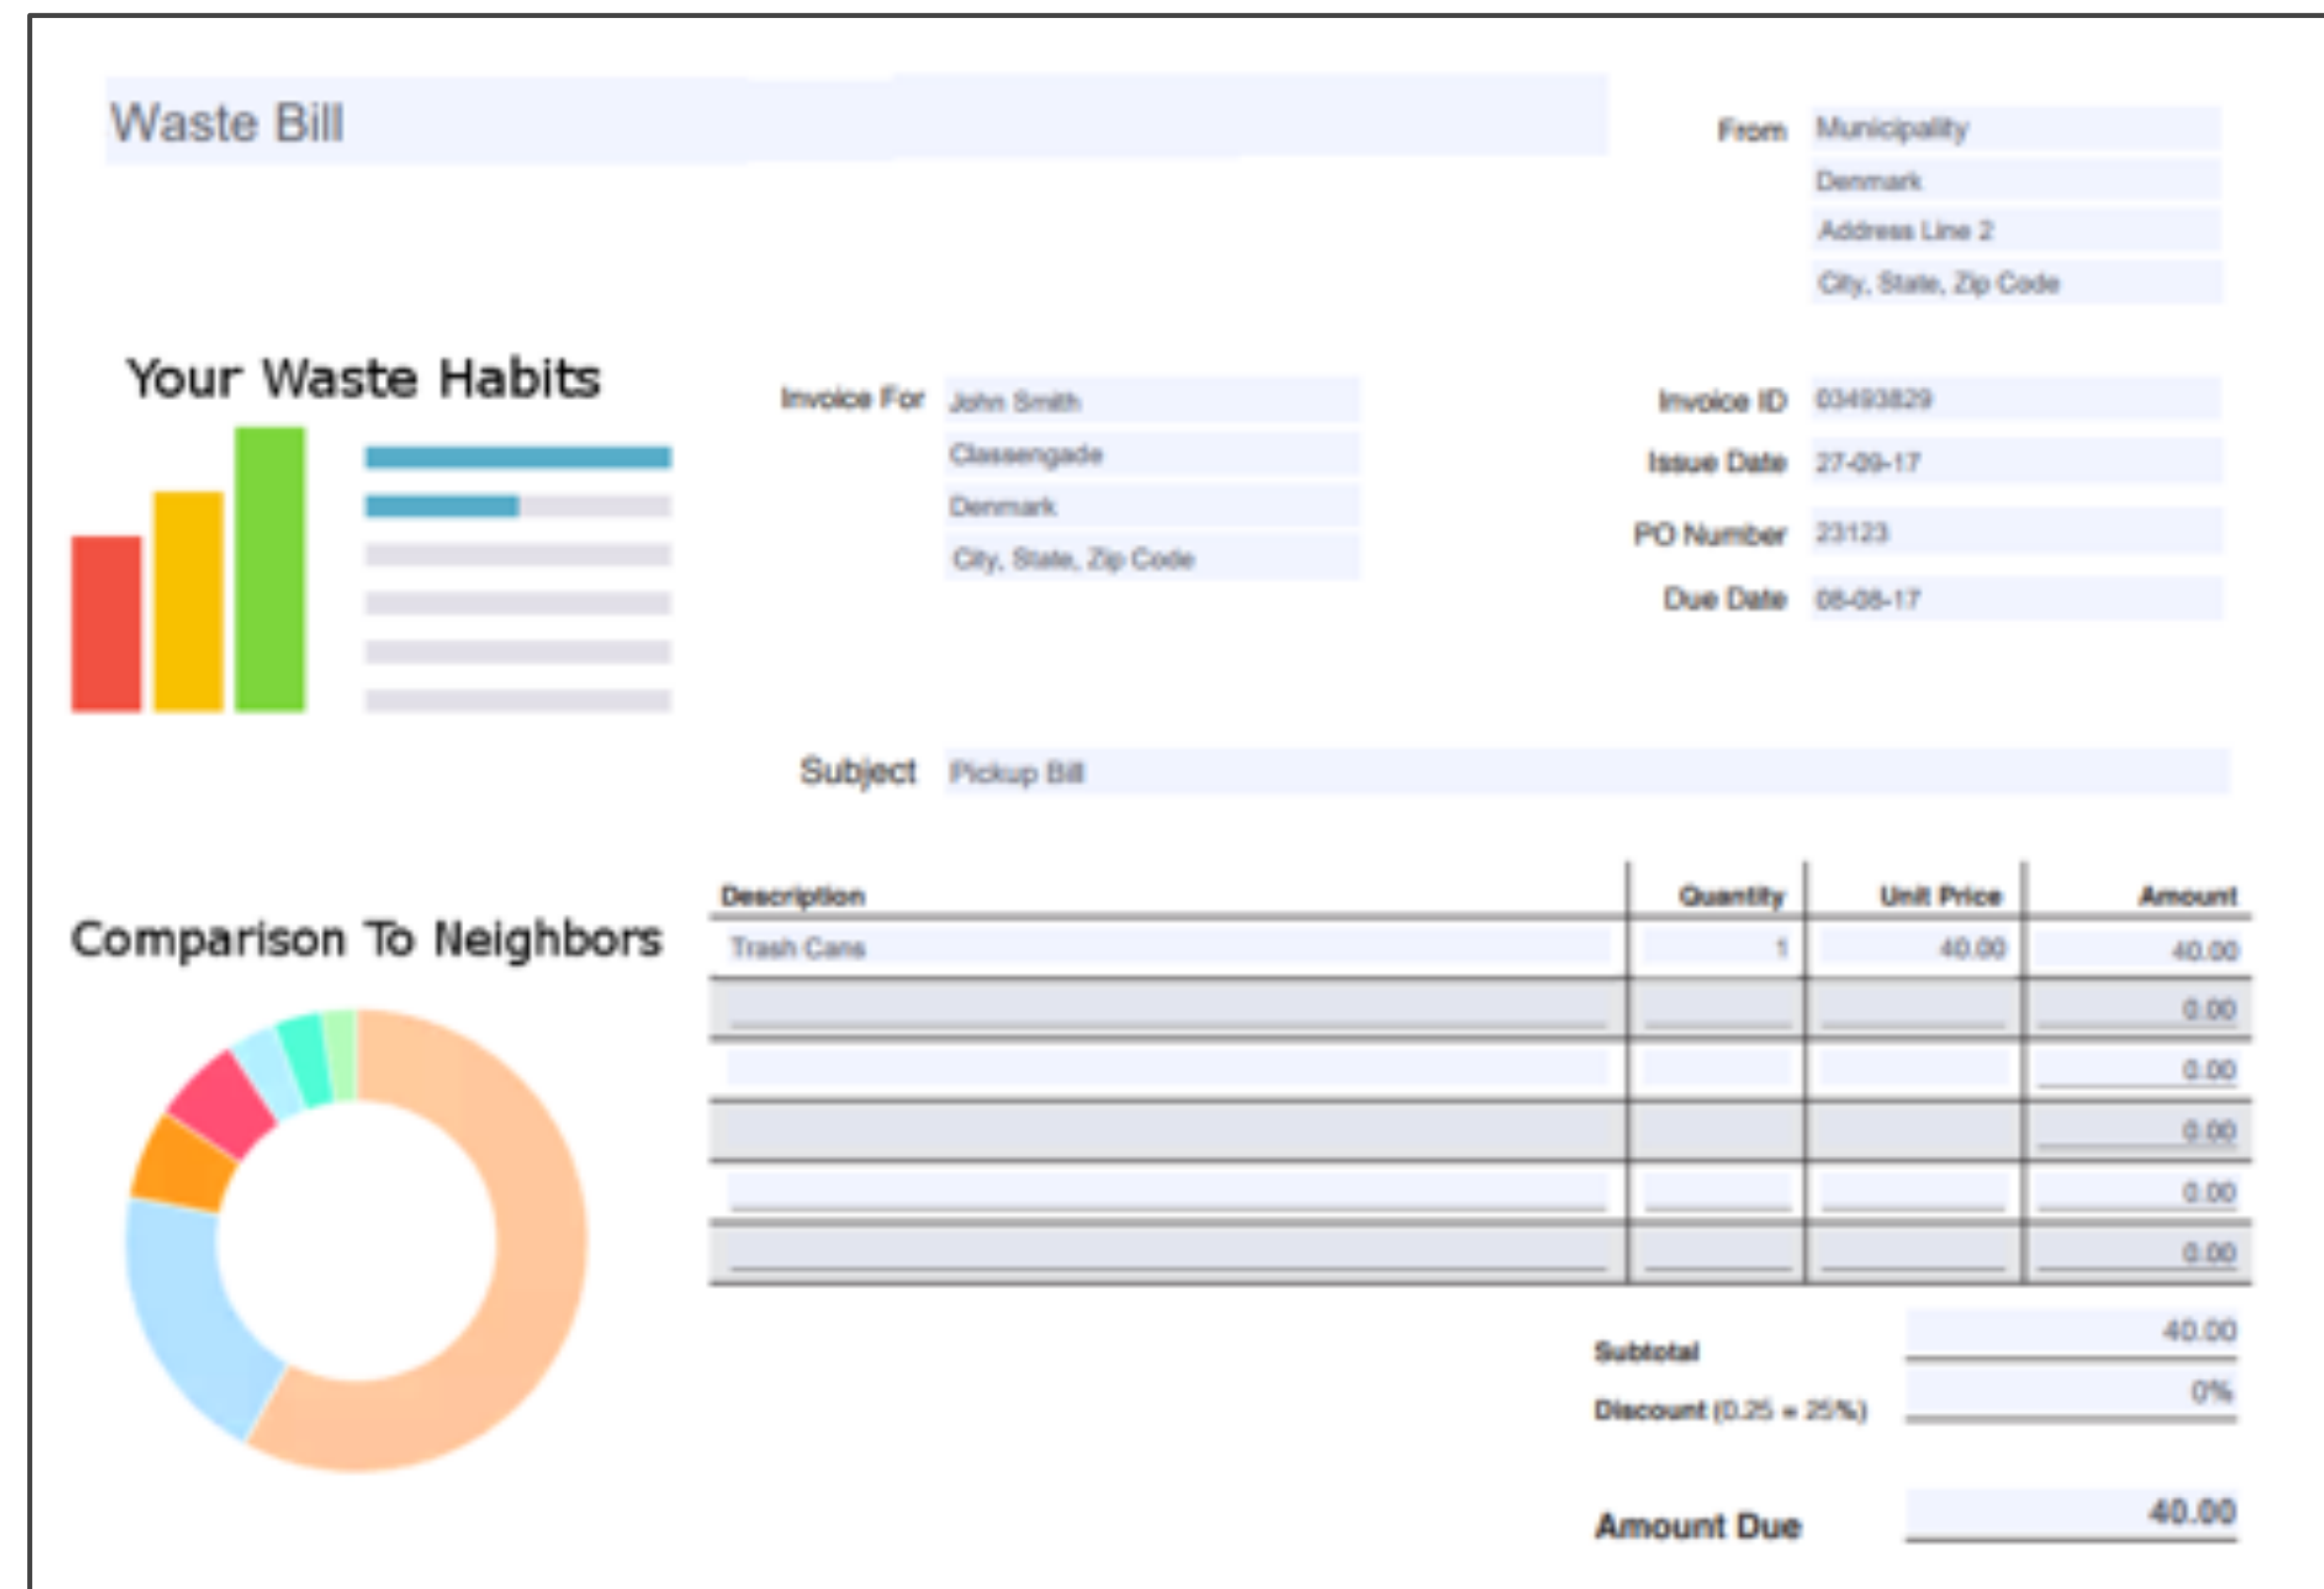

- Performance Analytics
- Predictive Analytics
- Route Optimization
- Feedback to Citizens

- Use waste collection trends to generate optimal collection routes
- Reduce amount of resources used
- Combine with real-time data for live route optimization

BENEFICIAL USES OF DATA ON WASTE

- Performance Analytics
- Predictive Analytics
- Route Optimization
- Feedback to Citizens

- Provide tailored feedback about waste habits
- Educate citizens and encourage waste reduction
- Rewards: pay-as-you-throw programs
- Recognition: congratulate and thank citizens

NEGATIVE USES OF DATA ON WASTE

Date, Street	Clasensgade 30	Fasanvej 42	Trianglen 26
01/09/17	5 kg	10 kg	7 kg
08/09/17	0 kg	9 kg	7 kg
15/09/17	0kg	10 kg	6 kg
22/09/17	6 kg	11 kg	13 kg

NEGATIVE USES OF DATA ON WASTE

The Vacation Problem

**Identify when homes
are unoccupied**

Marketing Problem

Identify demographics of homes
based on waste production

The Unknown Problem

Unforeseen problems and
uses in the future

LIMITATIONS ON THE USE OF BIG DATA

- **Laws exist that limit data collection and processing**
- **EU's General Data Protection Regulation**
 - **Stronger Consent Requirement**
 - **Requests to delete data**
 - **Document data flow**

- Background
- Introduction to Big Data
- Current State of Data on Waste
- Uses of Big Data on Waste
- **Our Recommendations**

OUR RECOMMENDATIONS

Collection, Management, Privacy, Cybersecurity

Investigate the viability of collecting data on waste per household

- Possible through varying degrees of technology
- Beneficial uses such as feedback to citizens and route optimization
- Municipalities should perform cost-benefit-analysis before collecting

Determine if feedback to citizens is beneficial

- Consider the use of feedback programs
- Be aware of the negative side effects
- Support further research on feedback

Collect more data on internal operations

- Financial data, data at transfer stations, data on shipments of waste
- Could be done through varying degrees of technology
- Must expand data collection and integration

Develop strong data management platforms

- Management platforms must be created before collection of data
- Data can take 1-2 years to organize into a useable state

Create standards for the sharing of data between organizations

- Data exchange practices are currently insufficient
- Develop an industry standard data model
- Work with industry leaders in data management

Identify incentives for sharing data

- All parties can benefit from data sharing
- Incentives need to be clearly identified
- Data sharing between waste processors & waste collectors

Recommendations in regards to personal data

- Properly document data
- Only collect data for a specific use
- Do not share personal data
- Only store personal data for as long as necessary
- Anonymize personal data when possible

Recommendations to improve cybersecurity practices

- Limit access and control over data systems based on job function
- Use best practices
 - passwords, updates, response plan, remote access

KEY TAKEAWAYS

- Household data on waste can be dangerous
- Data management is often overlooked
- A data sharing format must be developed
- Incentives for sharing data must be clearly articulated

THANK YOU!

Special Thanks:
Mette Godiksen
